                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ECORI site by treatment of T4 RNA ligase and the first strand cDNA was synthesized from oligo dT-selected mRNA by priming with dT-tailed vector. The dT-tailed vector was adjusted to have about 60nt. The cDNA vector was circularized with E. coli DNA ligase after digestion of ECORI which site is also included in vector. An RNA strand converted to a DNA strand by Okayama-Berg method. The obtained cDNA vectors were used for transformation of competent cells E. coli ToplOF' by electroporation method. The cDNA libraries constructed by this method are full-length enriched cDNA library. After analyzing and sequencing about 2,000 - 3,000 colonies in original cDNA library, the abundant cDNAs were selected and amplified by PCR reaction using vector region primer including T7 promotor as 5' primer and N(dT)14 as 3' primer. The PCR products were used as template for synthesis of biotinylated single stranded RNA by in vitro transcription reaction. The synthesized RNA probes were hybridized with antisense single stranded cDNAs prepared from original liberary and incubated with avidin-gel. After removing DNA-RNA hybrids by centrifuge, the subtracted CDNA libraries were constructed by transformation of the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                High
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Plate: 21
bate 2: NOLL; The poly (A) + KNA Was depinosynolylated with bacterial alkaline phosphatase (BAP) and then decapped intact mRNA was ligated with DNA-RNA linker including ECORI site by treatment of T4 RNA ligase and the first strand cDNA was synthesized from oligo dT-selected mRNA by priming with dT-tailed vector. The dT-tailed vector was adjusted to have about 60nt. The cDNA vector was adjusted to have about 60nt. The cDNA vector was adjusted to have about 60nt. The cDNA vector. An RNA strand converted to a DNA strand by Okayama-Berg method. The obtained cDNA vectors were used for transformation of competent cells E. coli ToplOF' by electroporation method. The cDNA libraries constructed by this method are full-length enriched cDNA library. After analyzing and sequencing about 2,000 - 3,000 colonies in original cDNA library, the abundant cDNAs were selected and amplified by PCR reaction using vector region primer including T7 promotor as 5' primer and N(dT)14 as 3' primer. The PCR products were used as template for synthesis of biotinylated single stranded cDNAs prepared from original liberary and incubated with avidin-gel. After removing DNA-RNA hybrids by centrifuge, the subtracted cDNA libraries were constructed by transformation of the remaining DNA into competent cells E. coli ToplOF' with electroporation method."

The library was constructed according to Bonaldo, Lennon and Soares, Genome Research, 6:791-806, 1996. First strand cDNA synthesis was primed with an oligo-dT primer containing a Not I site. Double stranded cDNA was ligated to an EcoR I adaptor, digested with Not I, and cloned directionally into pT7T3-Pac vector. The oligonucleotide used to prime the synthesis of first-strand cDNA contains a library tag sequence that is located between the Not I site and the (dT)18 tail. The sequence tag for this library is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           TAG_TISSUE=Normal Lung Epithelial Cells Tissue nos 369-371 and 380-383

RESULT 1 AAR99168 Aprotinin; Kunitz domain; human neutrophil elastase; hNE; connective tissue; alpha 1 protease inhibitor; API; neutrophil; alphal antitrypsin; respiratory disorder; cystic fibrosis; 04-JUL-1996. Synthetic. smokers emphysema. Genetically engineered aprotinin-like Kunitz domain (EPI-HNE-4). AAR99168; 16-DEC-1994; 15-DEC-1995; WO9620278-A2 12-FEB-1997 AAR99168 standard; protein; (first entry) 94US-00358160. 95WO-US016349. 56 ጅ

Genetically engineered human derived Kunitz domains can be used to inhibit human neutrophil elastase, an enzyme involved in the elimination of pathogens and the restructuring of connective tissue. In cases of reduction of the circulating alpha-1-protease inhibitor (API or alphal antitrypsin), or the inactivation of API by oxidation (smokers emphysema), extensive destruction of the lung tissue may result from uncontrolled elastolytic activity of human neutrophil elastase. Other respiratory disorders such as cystic fibrosis are thought to be caused by human neutrophil elastase release by neutrophils. The genetically engineered human derived Kunitz domains can be used to treat such New engineered inhibitors of human neutrophil elastase - contg. aprotinin -like Kunitz domain for treating, e.g. cystic fibrosis or other respiratory disorders. Claim 1; Page 49; 105pp; English.

                                                                                                                                                                                                                                                                                        The invention relates to a novel albumin fusion protein comprising a Kunitz domain peptide or its fragment or variant and an albumin or its fragment or variant. The fusion protein of the invention demonstrates cytostatic and haemostatic activities and may be useful for preparing a composition for treating a patient with hereditary angioedema, an angioedema-related disease, cancer, a cancer-related disease or a bleeding disorder, as well as during gene therapy procedures. The current sequence is that of the albumin fusion protein-related DX-890 peptide of
                                                                                                                                                                                                                  Sequence 56 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Albumin fusion protein comprising a Kunitz domain peptide and an albumin, useful for preparing a composition for treating a patient with hereditary angioedema or angioedema-related disease, cancer or bleeding disorder.

                                                                                                                                                                                                                                                                                                                                                                                                               The present invention describes a method (M1) for preventing or reducing ischaemia in a patient. M1 involves administering to the patient a composition comprising a polypeptide (I) having an amino acid sequence of ADP71926 and inhibiting kallikrein. (I) has vasotropic activity, and can be used as a kallikrein inhibitor. (M1) is useful for preventing or reducing ischaemia in a patient such as perioperative blood loss due to a surgical procedure which is cardiothoracic surgery (e.g. cardiopulmonary bypass or coronary artery bypass grafting) performed on the patient. (M1) is also useful for preventing or reducing the onset of systemic inflammatory response associated with a surgical procedure in a patient which involves administering (I) to a patient. The present sequence is used in the exemplification of the present invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to proteins comprising kunitz domain peptide, designated DPI-14 for inhibiting human neutrophil elastase, fused to albumin. The invention is useful for treating cystic fibrosis and related diseases, hereditary angioedema, cancer and related diseases including chronic obstructive pulmonary disease, asthma, bronchitis, acute respiratory syndrome, pneumonia and bleeding. The invention acts as a cytostatic and haemostatic agent. The present sequence is a DX-890 (an inhibitor of human neutrophil elastase) kunitz domain peptide. This sequence is used in the exemplification of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         #X###X#XDDDDDDDDDDDDDDDDDDDDX&
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Genetically engineered human derived Kunitz domains can be used to CC inhibit human neutrophil elastase, an enzyme involved in the elimination of pathogens and the restructuring of connective tissue. In cases of CC reduction of the circulating alpha-1-protease inhibitor (ApI or alphal CC emphysema), or the inactivation of ApI by oxidation (smokers CC emphysema), extensive destruction of the lung tissue may result from CC uncontrolled elastolytic activity of human neutrophil elastase. Other CC respiratory disorders such as cystic fibrosis are thought to be caused by CC human neutrophil elastase by neutrophils. The genetically CC engineered human derived Kunitz domains can be used to treat such crespiratory disorders. See AAR99146-R99211. Fusion genes were used in the CC respiratory disorders. See AAR99146-R99211. Fusion genes were used in the CC production of the Kunitz domain derivatives. Protein expression cassettes are then cloned into the plasmid pHIL-D2 using BBtBI and EcoRI CC restriction sites. The cloned sequence is under the transcriptional CC control of Pichia pastoris aox1 gene promoter and regulatory sequences and downstream polyadenylation and transcription termination sequences. CC Transformed strains of P. pastoris were used to express the various EPI-CC ensemble of the control of Pichia pastoris were used to express the various EPI-CC ensemble of the control of proteins derived from the BPTI and ITI-D2 Kunitz domains. This sequence is a modified Kunitz domain (EPI-HNE-4) which was expressed from the control of Pichia pastoris were used to express the capture of the control of Pichia pastoris were used to express the various EPI-CC ensemble of the control of Pichia PATICA contro

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         mating factor prepropeptide or its variant, which is modified so as to replace the Lysine residue in position 76 of the amino acid sequence of the naturally occurring prepropeptide by an Alanine residue. The nucleotide sequence is ligated to the 5' terminal of a nucleotide sequence is ligated to the 5' terminal of a nucleotide sequence coding for EPI-hNE-4. An expression vector for the sequence is also claimed. The gene construct or vector is useful for transforming microorganisms (particularly yeast) to produce EPI-hNE-4 protein with very low levels of its improperly processed form. The gene construct, nucleotide sequence, expression vector or microorganisms is useful for producing or secreting a protein, particularly EPI-hNE-4, which contains undetectable levels of the EPI-hNE-4 (n+9). This facilitates further purification steps, and therefore results in economies both on the financial and time-spent scale. The present sequence is a mutated version of the Pichia pastoris EPI-hNE-4 protein used in the exemplification of
                                                    New fused gene constructs and expression vectors, useful for transforming microorganisms (particularly the yeast Pichia pastoris) for use in producing e.g. EPI-hNE-4 proteins with very low levels of its improperly processed form.
                                                                                                                                                                                WPI; 20

The CC nucleotide sequence is ligated to the 5 terminal of a nucleotide sequence is case of the sequence provided sequence, expression vector is useful for transforming comparism (particularly yeast) to produce EPT-NNE-4 protein with contains of the sequence, expression vector or microorganism is useful for careful for concleotide sequence, expression vector or microorganism is useful for careful sequence, expression, particularly EPT-NNE-4, which contains call indetectable levels of the EPT-NNE-4 (n+9). This facilitates further containing the S. cerevisiae alpha matting factor prepropeptide and the profession prepropeptide and the careform assets of the present sequence is a fusion protein containing the S. cerevisiae alpha matting factor prepropeptide and the careform prepropeptide and the careform containing the S. cerevisiae alpha matting factor prepropertide and the careform containing the S. cerevisiae alpha matting factor prepropertide and the careform containing the S. cerevisiae alpha matting factor prepropertide and the careform containing the S. cerevisiae alpha matting factor prepropertide and the careform containing the S. cerevisiae alpha matting factor prepropertide and the careform containing the S. cerevisiae alpha matting factor prepropertide and the careform containing the S. cerevisiae alpha matting factor prepropertide and the careform containing the S. cerevisiae alpha matting factor prepropertide and the careform containing the S. cerevisiae alpha matting factor prepropertide and the careform containing the S. cerevisiae alpha matting the S. cerevisiae alpha matting the S. cerevisiae alpha matting the S. cerevisiae alph
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Query Match
              The invention relates to a novel albumin fusion protein comprising a Kunitz domain peptide or its fragment or variant and an albumin or its fragment or variant. The fusion protein of the invention demonstrates cytostatic and haemostatic activities and may be useful for preparing a composition for treating a patient with hereditary angioedema, an angioedema-related disease, cancer, a cancer-related disease or a bleeding disorder, as well as during gene therapy procedures. The current sequence is that of the C-terminal albumin-(GGS)4GG-DX-890 fusion protein
                                                                                                                                                                                                                                                                                                                                                                                                                                  Hauser H,

                                                                                                                                                                      The invention relates to proteins comprising kunitz domain peptide, designated DPI-14 for inhibiting human neutrophil elastase, fused to albumin. The invention is useful for treating cystic fibrosis and related diseases, hereditary angioedema, cancer and related diseases including chronic obstructive pulmonary disease, asthma, bronchitis, acute respiratory syndrome, pneumonia and bleeding. The invention acts as a cytostatic and haemostatic agent. The present sequence is a C-terminal DX-890-(GGS)4 GG-albumin fusion protein. This fusion protein contains DX-890 cDNA encoding protein, GS linker region and human albumin (HA) encoding protein. This sequence is used in the exemplification of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Kunitz domain peptide; cystic fibrosis; cystic fibrosis related disea hereditary angioedema; cancer; chronic obstructive pulmonary disease; asthma; bronchitis; acute respiratory syndrome; pneumonia; bleeding; cytostatic; haemostatic; chimeric; DX-890; human albumin; HA; human.

The invention is useful for treating cystic fibrosis and relationsess, hereditary angioedema, cancer and related diseases including chronic obstructive pulmonary disease, asthma, bronchitis, acute respiratory syndrome, pneumonia and bleeding. The invention acts as a cytostatic and haemostatic agent. The present sequence is a N-terminal -890-(GGS)4 GG-albumin fusion protein. This fusion protein contains DX-890 cDNA encoding protein, GS linker region and human albumin (HA) encoding protein. This sequence is used in the exemplification of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Kunitz domain peptide; cystic fibrosis; cystic fibrosis related disea hereditary angioedema; cancer; chronic obstructive pulmonary disease; asthma; bronchitis; acute respiratory syndrome; pneumonia; bleeding; cytostatic; haemostatic; chimeric; DX-890; human albumin; HA; human.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                N-terminal DX-890-(GGS)4 GG-albumin fusion protein.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to a novel albumin fusion protein comprising a Kunitz domain peptide or its fragment or variant and an albumin or its fragment or variant. The fusion protein of the invention demonstrates cytostatic and haemostatic activities and may be useful for preparing a composition for treating a patient with hereditary angioedema, an angioedema-related disease, cancer, a cancer-related disease or a bleeding disorder, as well as during gene therapy procedures. The current sequence is that of the albumin fusion protein-related plasmid pbB2300X2 modified NotI expression cassette protein of the invention which has N-terminal DX-890 and C-terminal linker ready for a second DX-890 sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          (AVET )

The invention is useful for treating cystic fibrosis and related diseases, hereditary angioedema, cancer and related diseases including chronic obstructive pulmonary disease, asthma, bronchitis, acute respiratory syndrome, pneumonia and bleeding. The invention acts as a cytostatic and haemostatic agent. The present sequence is a pDB2300X2-2xGS linker fusion protein. This chimeric protein contains DX-890 protein at its N-terminal end, rHA synthase gene encoding protein and linkers at
          Synthetic.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to a novel albumin fusion protein comprising a Kunitz domain peptide or its fragment or variant and an albumin or its fragment or variant. The fusion protein of the invention demonstrates cytostatic and haemostatic activities and may be useful for preparing composition for treating a patient with hereditary angioedema, an angioedema-related disease, cancer, a cancer-related disease or a bleeding disorder, as well as during gene therapy procedures. The curr sequence is that of the albumin fusion protein-related DX-890. .(GGS) 4GG. .HA. .(GGS) 4GG. .DX-890 protein of the invention.
                                                                                                                                                                                                                Kunitz domain peptide; cystic fibrosis; cystic fibrosis related disease; hereditary angioedema; cancer; chronic obstructive pulmonary disease; asthma; bronchitis; acute respiratory syndrome; pneumonia; bleeding;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Albumin fusion protein comprising a Kunitz domain peptide and an albumin, useful for preparing a composition for treating a patient with hereditary angioedema or angioedema-related disease, cancer or bleeding disorder.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     (AVET )

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to proteins comprising kunitz domain peptide, designated DPI-14 for inhibiting human neutrophil elastase, fused to albumin. The invention is seful for treating cystic fibrosis and relat diseases, hereditary angioedems, cancer and related diseases including chronic obstructive pulmonary disease, asthma, bronchitis, acute respiratory syndrome, pneumonia and bleeding. The invention acts as a cytostatic and haemostatic agent. The present sequence is a mature pDB2300X3-2x0X-890 fusion protein. This chimeric protein contains two D 890 proteins, rHA synthase gene encoding protein and the linkers. This sequence is used in the exemplification of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          (LADN/)
(LEYA/)
Albumin fusion protein comprising a Kunitz domain peptide and an albumin, useful for preparing a composition for treating a patient with hereditary angioedema or angioedema-related disease, cancer or bleeding disorder.

The invention relates to proteins comprising kunitz domain peptide, designated DPI-14 for inhibiting human neutrophil elastase, fused to albumin. The invention is useful for treating cystic fibrosis and relat diseases, hereditary angioedema, cancer and related diseases including chronic obstructive pulmonary disease, asthma, bronchitis, acute respiratory syndrome, pneumonia and bleeding. The invention acts as a cytostatic and haemostatic agent. The present sequence is a mature DPI-(GGS)4 GG-THA-(GGS)4 GG-DX-890 fusion protein. This fusion protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to a novel albumin fusion protein comprising a Kunitz domain peptide or its fragment or variant and an albumin or its fragment or variant. The fusion protein of the invention demonstrates cytostatic and haemostatic activities and may be useful for preparing a composition for treating a patient with hereditary angioedema, an angioedema-related disease, cancer, a cancer-related disease. The current bleeding disorder, as well as during gene therapy procedures. The current sequence is that of the plasmid pDB2301X-derived DPI-14-(GGS)4GG-THA-(GGS)4GG-DX-890 fusion mature protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    hereditary angioedema; cancer; chronic obstructi asthma; bronchitis; acute respiratory syndrome; cytostatic; haemostatic; human; rHA synthase gen

                                                                                     The invention relates to a novel albumin fusion protein comprising a Kunitz domain peptide or its fragment or variant and an albumin or its fragment or variant. The fusion protein of the invention demonstrates cytostatic and haemostatic activities and may be useful for preparing a composition for treating a patient with hereditary angioedema, an angioedema-related disease, cancer, a cancer-related disease or a bleeding disorder, as well as during gene therapy procedures. The current sequence is that of the albumin fusion protein-related plasmid pDB2300X3 modified NotI expression cassette protein of the invention which has 2 DX
                                                                                                                                                                                                                                             Albumin fusion protein comprising a Kunitz domain peptide and an albumin, useful for preparing a composition for treating a patient with hereditary angioedema or angioedema-related disease, cancer or bleeding disorder.
                                                                                                                                                                                                                                                                                                                                                                            (AVET )

AX The invention relates to proteins comprising kunitz domain peptide, designated DPI-14 for inhibiting human neutrophil elastase, fused to albumin. The invention is useful for treating cystic fibrosis and related diseases, hereditary angioedema, cancer and related diseases including chronic obstructive pulmonary disease, asthma, bronchitis, acute respiratory syndrome, pneumonia and bleeding. The invention acts as a cytostatic and haemostatic agent. The present sequence is a pDB2300X3-2xDX-990 fusion protein. This chimeric protein contains two DX-990 proteins, THA synthase gene encoding protein and the linkers. This sequence is used in the exemplification of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Kunitz domain peptide; cystic fibrosis; cystic fibrosis related disentereditary angioedema; cancer; chronic obstructive pulmonary disease asthma; bronchitis; acute respiratory syndrome; pneumonia; bleeding; cytostatic; haemostatic; chimeric; human; rHA synthase gene;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Query Match
                                                                                                                                                                                                                                      The invention relates to a novel albumin fusion protein comprising a Kunitz domain peptide or its fragment or variant and an albumin or its fragment or variant. The fusion protein of the invention demonstrates cytostatic and haemostatic activities and may be useful for preparing a composition for treating a patient with hereditary angioedema, an angioedema related disease, cancer, a cancer-related disease or a bleeding disorder, as well as during gene therapy procedures. The curre sequence is that of the plasmid pDB2301X-derived DPI-14-(GGS)4GG-rHA-(GGS)4GG-DX-890 fusion precursor protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Albumin fusion protein comprising a Kunitz domain peptide and an albumin, useful for preparing a composition for treating a patient with hereditary angioedema or angioedema-related disease, cancer or bleeding disorder.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Synthetic. Unidentified.

                                                                                                                                                                                                                                                                            chronic obstructive pulmonary disease, asthma, bronchitis, acute respiratory syndrome, pneumonia and bleeding. The invention acts as a cytostatic and haemostatic agent. The present sequence is a DPI-14-(GGS)4 GG-THA-(GGS)4 GG-DX-890 fusion protein. This fusion protein contains DPI-14 CDNA encoding protein, GS linker region, rHA (human albumin) synthase gene encoding protein and DX-890 encoding protein. This sequence is used in the exemplification of the invention.
                                                                                                                                                                                                                                                                                                                                                                               The invention relates to proteins comprising kunitz domain peptide, designated DPI-14 for inhibiting human neutrophil elastase, fused to albumin. The invention is useful for treating cystic fibrosis and related diseases, hereditary angioedema, cancer and related diseases including
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      (LADN/)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Kunitz domain peptide; cystic fibrosis; cystic fibrosis related dise hereditary angioedema; cancer; chronic obstructive pulmonary disease asthma; bronchitis; acute respiratory syndrome; pneumonia; bleeding; cytostatic; haemostatic; human; rHA synthase gene; human albumin; HA
                                                                                                                                                                                                                                                  Sequence

                                                                                                                                                                                                                                                                                                                                                                                                                 Genetically engineered human derived Kunitz domains can be used to inhibit human neutrophil elastase, an enzyme involved in the elimination of pathogens and the restructuring of connective tissue. In cases of reduction of the circulating alpha-1-protease inhibitor (API or alphal antitrypsin), or the inactivation of API by oxidation (smokers emphysema), extensive destruction of the lung tissue may result from uncontrolled elastolytic activity of human neutrophil elastase. Other respiratory disorders such as cystic fibrosis are thought to be caused by human neutrophil elastase release by neutrophils. The genetically engineered human derived Kunitz domains can be used to treat such respiratory disorders. See AAR99146-R99211

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present invention describes a method (M1) for preventing or reducing ischaemia in a patient. M1 involves administering to the patient a composition comprising a polypeptide (I) having an amino acid sequence of ADF71926 and inhibiting kallikrein. (I) has vasotropic activity, and can be used as a kallikrein inhibitor. (M1) is useful for preventing or reducing ischaemia in a patient such as perioperative blood loss due to a surgical procedure which is cardiothoracic surgery (e.g. cardiopulmonary bypass or coronary artery bypass grafting) performed on the patient. (M1) is also useful for preventing or reducing the onset of systemic
                                                                                                                                                          07-JUN-2002;

M1 involves administering to the patient a composition comprising a polypeptide (I) having an amino acid sequence of ADF71926 and inhibiting kallikrein. (I) has vasotropic activity, and can be used as a kallikrein inhibitor. (M1) is useful for preventing or reducing ischaemia in a patient such as perioperative blood loss due to a surgical procedure which is cardiothoracic surgery (e.g. cardiopulmonary bypass or coronary artery bypass grafting) performed on the patient. (M1) is also useful for preventing or reducing the onset of systemic inflammatory response associated with a surgical procedure in a patient which involves administering (I) to a patient. The present sequence is used in the exemplification of the present invention.
Genetically engineered human derived Kunitz domains can be used to inhibit human neutrophil elastase, an enzyme involved in the elimination of pathogens and the restructuring of connective tissue. In cases of reduction of the circulating alpha-1-protease inhibitor (API or alphal antitrypsin), or the inactivation of API by oxidation (smokers emphysema), extensive destruction of the lung tissue may result from uncontrolled elastolytic activity of human neutrophil elastase. Other respiratory disorders such as cystic fibrosis are thought to be caused by human neutrophil elastase. Release by neutrophils. The genetically
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Aprotinin; Kunitz domain; human neutrophil elastase; hNE; connective tissue; alpha 1 protease inhibitor; API; neutrophil; alphal antitrypsin; respiratory disorder; cystic fibrosis; smokers emphysema.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence 56 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Synthetic

engineered human derived Kunitz domains can be used to treat

```
respiratory disorders. See AAR99146-R99211. Fusion genes were used in the production of the Kunitz domain derivatives. Protein expression cassettes are then cloned into the plasmid pHII-D2 using BstBI and EcoRI restriction sites. The cloned sequence is under the transcriptional control of Pichia pastoris aox1 gene promoter and regulatory sequences and downstream polyadenylation and transcription termination sequences. Transformed strains of P. pastoris were used to express the various EPI-HNE proteins derived from the BPII and ITI-D2 Kunitz domains. This sequence is a modified Kunitz domain (EPI-HNE-3) which was expressed from a pHIL-D2 plasmid construct designated pHIL-D2 (MFalphaPrePro::EPI-HNE-3).
Sequence 141 AA;
